Videostroboscopy

Your Videostroboscopy test is scheduled for ____________, ____________ at ____________ am/pm.
(Day) (Date)

The Speech Pathologist conducting your Videostroboscopy test is Rona Epstein, MA, CCC-SLP.

Videostroboscopy (strobe) is a test performed in the office and is used to assess the structure and movement of the vocal cords. A rigid endoscope is placed in the back of the mouth to illuminate the vocal cords. Typically, the vocal cords vibrate at a rate that is too rapid for the human eye to observe. Therefore, a strobe light is used to simulate a slow-motion view of the vocal cords during voice and breathing. The exam is recorded and will be reviewed by your physician.

Videostroboscopy is painless and there is no preparation for this test. You may eat and drink prior to the exam.

Please call the office if you have any questions. If you are unable to keep your appointment, please provide 24 hours notice.
